PROBLEMS

PROBLEM

CO_2 emission plays an important role in affecting our economy.

- CO_2 emission causes increase in temperature. Warmer temperatures can cause economic losses for a country through many pathways such as lowering agricultural yields, reducing labour productivity and decreasing industrial output.
- Higher carbon foot print is indicative of geater energy costs. Expenditure on energy bills could be channeled to other areas of business that require more attention.

Unearthing the impact of human activity in CO2 emissions

Person 1

It is major cause for the decline in economy.

CO2 emission causes major climatic change

Deforestation causes major increase in global warming

Person 4

CO2 emissions causes viral climatic change

CO2 emissions affects marine ecosystems

Exposure to CO2 causes variety of health

Thoughts on CO2 emission

Person 2

People are super changing the natural green house effect.

Transportation causes increase of CO2 emission

Agriculture also causes 11 percent of green house gas emissions.

Person 3

We can trap CO2 to produce energy in alternative way

Major impact is global warming

It causes extinction of species
